

# MASQ is the decentralized internet. Powered by You.

## Overview

MASQ protects your privacy whilst using the internet, and together users create a censorship-free global web by combining our connections – and you get paid crypto for supporting the MASQ Network. This allows users in any location to access content wherever it's located in the world.

## How does it work?

MASQ does this by having users across the globe share their internet connections together in a virtual web – creating a **dMN** (decentralized Mesh Network).

MASQ is encrypted and untraceable. All traffic is routed through the network securely with three or more ‘hops’ through other nodes. The more hops there are, the more private and secure. At six hops it's *clandestine* too – this means not even ISPs or malicious entities can tell MASQ is running!

Setup is simple, just download the app, create a couple of Ethereum wallets for spending and earning, load up some MASQ, and connect to a neighborhood of fellow MASQ-users.

## How far is MASQ into development?

MASQ has a working product that is being tested internally as of early 2021. A new User Experience is being designed and developed for a beta release. See our milestones below!

- Relaunch the UI
- Liquidity
- Electron App
- Public Beta
- 100% Clandestine
- Partnerships & Integration

### BENEFITS

- ❖ Access the global web
- ❖ Encrypted & Untraceable
- ❖ Earn Cryptocurrency
- ❖ No more ISP Spying
- ❖ Open Source
- ❖ Built on Ethereum

### TOKEN

Total Supply: **37.5 MILLION**  
Presale: **NONE**  
IDO: **NONE**
