

# the web3 decentralized private browser

POWERED BY polygon

## Overview

Current tools like VPN and Tor are becoming less effective in today's modern digital landscape. Users desire easy-to-use solutions that aren't hosted by centralized companies that sharing customer data.

MASQ Network offers users a privacy-centric **web3** browsing experience, built on a peer to peer network. Users enjoy **borderless browsing** from any region, visiting their favourite dApps and websites, while also earning cryptocurrency by sharing their bandwidth.

## How does it work?

MASQ Network allows users across the globe to interact securely across their internet connections – creating a **dMeshVPN** (decentralized Mesh VPN).

MASQ routes traffic with encryption and censorship resistance, and all traffic travels securely over three or more 'hops' through other users. The more hops there are, the more private and secure.

User Experience is **paramount**, so the software is designed to take care of the heavy lifting and get users browsing privately in minutes.

The **MASQ desktop app** is full of features to enhance a web3 experience - complete with web3 App Library, Metamask Extension, interactive wallet page and browsing controls. All delivered in a polished privacy browser that guides new users to setup in minutes.

## How far is MASQ into development?

MASQ has a working desktop app that is in Beta testnet, about to open Public Beta launch groups in Q3 2022. Users can access all the core features of the software, and share feedback for further improvements, and feature requests.

## About MASQ

MASQ Network builds on an open source codebase, with team members across the world. From humble beginnings in 2019, it has grown through community roots into a thriving ecosystem of users, partners and supporters across the world.

### BENEFITS

- Borderless browsing
- Encrypted & Private
- Open Source
- No Trackers
- Earn Cryptocurrency
- Powered by Polygon

### TOKEN

- Type: **ERC20 utility token**  
Total Supply: **37.5 MILLION**  
Presale: **NONE**  
IDO: **NONE**

### COMMUNITY

MASQ UTILITY TOKEN AVAILABLE ON MULTIPLE EXCHANGES
